GENERAL SPECIFICATIONS

• Up to 4 input for measuring thermocouples type J, K, E, N, S, R, B, T.

• Up to 4 input for measuring mV voltage input.

• Sampling time for channels at 240 ms or 480 ms for all channels.

• 1500 V_{ac} input isolation compared with other low-voltage circuits.

• Easy connections for power supply and serial communication by PDM-DIN bus system that can be mounted on standard DIN 46277 rail.

• Removable terminals with section of 2.5 mm².

• RS485 serial communication with Modbus-RTU protocol, maximum 64 nodes.

• Module insertion or extraction from PDM-DIN bus without interruption for serial communication and power supply.

• Connection distance up to 1200 m.

• RS232 connection on front from 3,5 mm jack connector.

• Low consumption.

• Modbus address and Baud rate can be set through DIP-switches.

• Input measure can be set in temperature or mV.

• Programmable filters to stabilize the measured input.

• Cold junction compensation internal.

• Mains electric network frequency rejection > 54 dB.

TECHNICAL FEATURES

Thermocouples inputs

Thermocouples input

J, K, E, N, S, R, B, T.

Number of channel

4

Cold junction error

< 2 °C between 0 .. 50 °C

Input impedance

>10 MΩ

Current test (TC open)

< 200 nA, disactivable

DMRR

> 60 dB (50 Hz); > 54 dB (60 Hz).

Thermal Drift

< 50 ppm/K

Thermocouples Errors

Calibration : 0.1% FS.; Thermal sense : 0.01%/°C; EMC : 1% FS.

Sampling time

60 ms / channel o 120 ms / channel

mV-input

Voltage input

Bipolar with ± 160 mV range

Input impedance

> 10MΩ

Resolution

5 µV

mV error

Calibration : 0.1% FS; Thermal sense : 0.01%/°C; EMC : 1% FS.

Power supply

Voltage

10 ..40 V_{ac}
19 ..28 V_{AC} @ 50 ..60 Hz

Consumption

Typical: 1.5 W, Maximum: 2.5 W

Environmental condition

Temperature

-10 ..+65°C

Humidity

30 ..90% a 40°C not condensing

Storage Temperature

-20 ..+85°C

Degree protection

IP20

Connections

Removable 3-way screw terminals, 5,08 pitch

Rear IDC10 connector for DIN 46277 rail

Frontal jack 3.5 mm

Box / Dimensions

Dimensions

Analogue Inputs

Standards

The module is conforming to the following regulations:

EN61000-6-4/2002 (electromagnetic emission, industrial environment).

EN61000-6-2/2006 (electromagnetic immunity, industrial environment)

EN61010-1/2001 (safety). All circuits must be isolated from the other circuits under dangerous voltage with double isolation. The power supply transformer must comply with EN60742: "Isolated transformers and safety transformers".

Supplementary note for use:

Use in environment with 2 or less pollution degree.

MODBUS CONNECTIONS

1) Connect the module into the DIN rail (max 120)

2) Use a cable with a suitable length to connect the remote modules. In the following table there are data relative to:
- Maximum length of the Modbus bus: It defines the connection length between two modules that have bus terminator dip switch on. (see scheme 1).
- Drop length: Maximum length of branch (see scheme 1).

Bus lenght

Drop lenght

Node 2

Node 3

Node 4

Terminator

Lo

Bus Length

L.d. Drop Length

For the best performances it's recommended to use a shielded cable.

INSTALLATION

The module is designed to be installed, in vertical position, on DIN 46277 rail. For the best module performance and duration, avoid to place cables raceways and other objects that could obstruct ventilation slits.
Never install the modules near heat sources. The module installation is advised in the bottom of the control panel.

Inserting in the DIN rail

How the picture shows:

1) Insert the module IDC10 rear connector on the DIN rail free slot (inserting is univocal because connectors are polarized).

2) The module can be fixed on the DIN rail through the clench of the two hooks in the bottom.

ELECTRICAL CONNECTIONS

Power supply and Modbus interface

Power Supply and Modbus interface are available by using the PDM-DIN bus system for the DIN rail, by the rear IDC10 connector or by screw terminals.

DIP SWITCH (20 Ohm termination)

GNDSHLD CANH / A

GND CANL / B

In case of PDM-DIN accessories use, the signals may be provided by terminal blocks. The figure shows the meaning of the terminals and the position of the DIP-switch for network termination (not used in case of Modbus network).
GNDSHLD: Shield to protect the connection cables (recommended).

Input

The module accept in input, the following types of thermocouples: J, K, E, N, S, R, B, T. Although the module can be used to read voltage with ± 160 mV range.

10 - 40 V_{ac}

2

3

Screw terminal 2 and 3 are the alternative to PDM-DIN rail bus system to provide the power supply at the module. **The upper limits must not be exceeded otherwise the module can be damaged.** If the power supply source is not protected against overload, a safety fuse with a maximum acceptable value of **2.5 A** must be installed in the power supply line.

6

Connection for RS485 communication with the Modbus Master system is the alternative to PDM-DIN rail bus system.
Note: the indication of RS485 connection polarity is not standard so for some masters may be inverted.

RS232

The RS232 port can be used to communicate and also to program the module.
PDM Studio is the configuration software. The RS232 communication use the following parameter of communications:

2400,8,N,1

RS232 and RS485 port use the same Modbus protocol. When RS232 communication is active, the serial RS485 bus network will be stopped. The RS485 will return automatically active a few seconds after the last data packed received from Rs232.
The 3.5 mm DB9 jack stereo connector for RS232 communication can either be assembled as indicated in the following figure or purchased as an accessory.

DIP-SWITCHES SETTING

The DIP-switches position defines the Modbus communication parameter: Address and Baud rate. In the following table the Baud rate and address value are listed as a function of the DIP-switches position:

FACTORY SETTING AND ADVANCED SETTING

Factory settings

Tutti i DIP-switch in OFF:

- Modbus protocol: - Communication parameters: 38400 8,N,1 Addr. 1

- Input channel 1 : mV

- Input channel 2 : mV

- Input channel 3 : mV

- Input channel 4 : mV

- Signal sampling time for all channels: 280 ms

CHAUVIN ARNOUX GROUP

PYRO

CONTROLE

694089A00-Ed1

ENGLISH 7/8

Advanced settings

Inputs channels can be set in voltage or thermocouple.

Signal sampling time can be set at 240 ms or 480 ms.

Possibility to set filters for the inputs measured.

Possibility to disable the current test for thermocouples.

Modification of standard parameters is possible by using configuration software PDM Studio (www.pyrocontrole.com).
For more information about a list of all registers and their functions consult the PDM General User manual.

Disposal of Electrical & Electronic Equipment (Applicable throughout the European Union and other European countries with separate collections programs). This symbol, found on your product or on its packaging, indicates that this product should not be treated as household waste when you wish to dispose of it. Instead, it should be handed over to an applicable collection point for the recycling of electrical & electronic equipment. By ensuring this product is disposed of correctly, you will help prevent potential negative consequences to the environment and human health, which could otherwise be caused by inappropriate disposal of this product. The recycling of materials will help to conserve natural resources. For more detailed information about the recycling of the product, please contact your local city office, waste disposal service of the retail store where you purchased this product.
